PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 8+ years of experience across Banking, FinTech, AI Platforms, and Sports Tech, with expertise in **TypeScript/JavaScript, Java (Spring Boot), Node.js, and React**. Proven track record architecting and building scalable distributed backend systems, data-driven and beautiful UIs, multi-agent AI platforms, and cloud services on AWS. Shipped services processing **200M+ requests/day** and AI customer-support automation reaching **60% resolution rates**.

EXPERIENCE

SENIOR FULL STACK ENGINEER | NEXT LEVEL SPORTS | MAY 2025 – PRESENT | REMOTE (NEW YORK, USA)

- Lead engineer on a **Timesheet & Payroll platform** paying **10,000+ coaches weekly** (Node.js, tRPC, Prisma, PlanetScale MySQL, Next.js), replacing a Google Sheets process, improving payroll efficiency **50%** and saving **~$1M/year**.
- Built a **multi-agent AI customer-service platform** (Mastra/TypeScript + Claude) with supervisor agents, code-enforced safety gates, and **LLM-as-judge evals**; **auto-resolves 60% of daily tickets**.
- Engineered a **PCI-conscious checkout** in Java and Spring Boot integrated with **Stripe**, with tokenized cards and explicit retry states: **30K+ transactions** with near-zero payment failures, saving **~$150K/year** over the prior SaaS.
- Architected a **Node.js webhook-processing backend** on AWS Lambda (idempotent handlers, retries, DLQ, reconciliation) and the monitoring stack (**Sentry, Rollbar**), so failures never lose data and regressions surface before users notice.
- Own the **AWS footprint** (EC2, ECS, S3, DynamoDB, RDS) with per-function IAM roles, Secrets Manager, standardized **Terraform** modules, and Docker builds shipped through GitHub Actions, so every infra change ships via reviewed CI/CD.
- Built the entire UI of the **marketing platform** (Next.js App Router, GraphQL, Contentful, ISR) and the payroll platform's front end (TanStack Query, Zustand, **role-based rendering**), serving **~160,000 Google impressions weekly**.
- Led a **cross-platform sports app with 55,000+ users** (React Native, Expo, EAS OTA), lifting engagement **40%** and hardening the WebSocket layer with heartbeats, backoff reconnection, and missed-event replay.
- Authored a **Claude Skill** encoding page schema and content guardrails, paired with a **Retool** self-serve UI, so marketing creates and manages **1,000+ pages** without an engineering ticket queue.
- Mandated **AI-assisted engineering** (Claude Code, Cursor, GitHub Copilot) with review and test gates, raising delivery speed without lowering the quality bar.

SENIOR SOFTWARE ENGINEER | PAYPAL | JAN 2021 – JAN 2024 | BANGALORE, INDIA

- Engineered **Java and Spring Boot REST services** for PayPal Home, Marketing, and Onboarding traffic, serving **200M+ requests/day at 99.99% uptime**, deployed as containerized Docker microservices on PayPal Console, PayPal's internal cloud platform, to carry global traffic.
- Optimized page-load latency and availability by employing a **4-tier caching solution** (LRU, key-value store, Redis, snapshots) with a circuit breaker, keeping 40,000+ pages serving through CMS outages at **99.9999% availability**.
- Shipped platform capabilities as **reusable npm packages** across **3 offshore teams**: the read-through caching layer (**99% cache-hit ratio**) and OpenTelemetry instrumentation adopted across global navigation, the marketing platform, and PayPal home, so every Node.js app got the same caching, fallback, and tracing without per-team rebuilds.
- Decoupled slow downstreams from user requests by building event-driven **Kafka** services partitioned by entity key, with idempotent consumers, retry topics, and an alerted dead-letter queue so no event was lost or double-processed.
- Built the **Splunk** dashboards, APM views, and alerting runbooks on-call ran on (Looker, Catchpoint synthetic monitoring), catching DDoS attempts and 4xx/5xx surges early, and owned production on PayPal's internal **Kubernetes** platform with rolling deploys, dependency-aware readiness probes, HPA autoscaling, and canary rollouts with automated rollback.
- Improved **global navigation load time by 50% to 250ms**, designing and delivering both the API service and the front end in Node.js, Express, Preact, Vite, and TypeScript; scaled it to **60+ countries**, each with its own locale, legal links, and products, lifting customer engagement across Xoom, Zettle, and Venmo on the header that ships with every PayPal page.
- Modernized the **Home and marketing platform** by standardizing content on Contentful, UI on a **React + Redux component library** (Storybook), and rendering server-side, enabling self-serve updates, **sub-3-second loads**, and lifting retention **8%** and interaction rates **35%**.
- Reinvented how offers and coupons reached PayPal users by revamping the UTM tracking and offer-suggestion algorithm with personalization, delivering the **paypal.com/offers** portal, lifting coupon engagement **8%** and retention **10%**.

- Ran controlled experiments on Home and Marketing using **ELMO**, PayPal's in-house experimentation platform, shipping changes behind **feature flags** with **A/B tests** and gradual ramps so impact was measured before full rollout.
- Mentored junior and mid-level engineers through code reviews, pairing, and technical onboarding, raising team velocity and code quality.

SENIOR PRODUCT ENGINEER | HARMAN INTERNATIONAL | NOV 2019 – JAN 2021 | BANGALORE, INDIA

- Developed resilient **Java and Node.js ingestion pipelines** for high-volume network telemetry, carrying bursty data from thousands of switches to query-ready surfaces without dropping events.
- Built the **observability system** from the ground up (structured logging, distributed tracing, alerting pipelines, on-call runbooks) that operations teams ran the platform on day to day.
- Made telemetry usable with real-time **D3.js dashboards** on Kibana and Elasticsearch, plus Three.js/WebGL views kept responsive under continuous WebSocket push.
- Ran the platform on **AWS** (S3, Lambda, EC2) and sped performance analysis **25%** with optimized SQL query patterns behind scalable RESTful APIs.

FRONTEND ENGINEER | RECROSOFT TECHNOLOGIES | AUG 2018 – NOV 2019 | BANGALORE, INDIA

- Engineered **Node.js microservices** and PostgreSQL schemas syncing real-time logistics data across Swiggy's two-sided delivery marketplace.
- Led the full UI build of a **React + Redux + Tailwind CSS PWA**, offline-first with service workers and IndexedDB, whose real-time logistics views improved operations efficiency **15%**.
- Cut front-end development time **40%** with a config-driven UI platform that let non-engineers assemble interfaces without code, backed by an in-house component library.
- Delivered a **Goldman Sachs** finance-management solution (custom Node.js APIs, offline-first PWA), lifting product adoption **10%**.

ASSOCIATE SOFTWARE ENGINEER | DANSKE BANK | AUG 2016 – AUG 2018 | BANGALORE, INDIA

- Designed secure **Java middleware** bridging Node.js applications with legacy DB2 mainframes, keeping ACID guarantees across financial transactions.
- Modernized the front end of Danske Bank's **Guarantees** product (billions in annual revenue), rebuilding pages and auth flows with HTML, JavaScript, and Node.js.
- Built a **blockchain document-clearance platform** on R3 decentralized networks and replaced e-Safe ID with Finnish National ID logon for Danske's Finland customers.

EDUCATION

MASTER OF SCIENCE, COMPUTER SCIENCE | SYRACUSE UNIVERSITY | JAN 2024 – MAY 2025 | SYRACUSE, NY

Coursework: Advanced Algorithms & Data Structures, Operating System Design & Architecture, Functional Programming (Haskell).

SKILLS

Languages: Java • TypeScript / JavaScript (ES6+) • SQL • Python • Kotlin

Backend: Spring Boot • Node.js • Express • tRPC • REST • GraphQL • WebSockets • Apache Kafka • Stripe integration • microservices • event-driven architecture

Cloud & Infra: AWS (ECS, Lambda, API Gateway, EC2, S3) • Docker • Kubernetes • Terraform • Vercel • GitHub Actions • CI/CD • canary & A/B deploys

Data: PostgreSQL • MySQL (PlanetScale) • Prisma • Redis • MongoDB • DynamoDB • Elasticsearch • DB2

Frontend: React 18 • Next.js (App Router, SSR/ISR/SSG) • React Native (Expo) • Preact • Redux • TanStack Query • Zustand • HTML5 • CSS3 • Tailwind CSS • CSS Modules • Storybook • WCAG 2.1 AA • Core Web Vitals

AI Engineering: LLM APIs (Anthropic, OpenAI) • multi-agent systems (Mastra) • evaluation harnesses & LLM-as-judge • RAG • safety gates • Claude Code • Cursor • GitHub Copilot

Observability: OpenTelemetry • Splunk & Splunk Observability Cloud • Sentry • Rollbar • Catchpoint • Looker • Kibana • distributed tracing • runbooks

Testing: Jest • Vitest • Playwright • Cypress • React Testing Library

Practices: Agile/Scrum • system design • full SDLC • code reviews • technical mentorship
